	B State contractor*
	X EPA Oversight**

Date Violation Was Determined

Table: CVIOLATION

Data Element Name:	Date Violation Was Determined
Description:	Date that a determination is made that the violation exists. This is not necessarily the same date as the date of the inspection or evaluation; for example, when the agency receives sample results or a legal determination.
Format:	DATE
Allowed Values:	Valid date on or after the Evaluation Date but on or before today's date.

Citation

Table: CVIOLATION

Data Element Name:	Citation
Description:	Citation from Federal or State regulations or statutes that specifies a violation or pending violation in sufficient detail to distinguish it from other violations intended to be addressed separately by other enforcement actions. These regulation numbers or citations can be found in the Code of Federal Regulations or in State regulation publications. They should be part of the inspection or evaluation report prepared by the person identifying the violation. New violations do not supersede resolved violations of the same regulation.
Format:	VARCHAR2(30)
Allowed Values:	N/A

Actual Return to Compliance Date

Table: CVIOLATION

Data Element Name:	Actual Return to Compliance Date
Description:	The date the agency determines that the handler demonstrated full physical compliance (the date compliance was verified). The handler will be considered to be out-of-full-physical-compliance until the actual returned to compliance date has been determined. Actual returned to compliance date does not necessarily mean that all enforcement actions are completed for this violation. For violations of omission (such as not manifesting a load of waste) the actual returned to compliance date is the date of a written commitment by the handler to comply in the future or the day of conviction in a criminal action. Penalty payment is not a condition of full physical compliance; however if non-payment is the only violation then the actual returned to compliance date is the date that payment is received.
Format:	DATE
Allowed Values:	Valid date on or after the Date Violation Was Determined but on or before today's date.

Violation Responsible Agency

Table: CVIOLATION

Data Element Name:	Violation Responsible Agency
Description:	Code indicating the agency responsible for determining the violation (or outcome of the pending violation if Class of Violation is 'P').
Format:	CHAR(1)
Allowed Values:	E EPA personnel C EPA contractor S State B State contractor* X EPA oversight**

Area of Violation Owner

Table: CVIOLATION

Data Element Name:	Area of Violation Owner
Description:	Foreign key to Owner in LU_EVALUATION_VIOLATION_AREA.

Area of Violation

Table: CVIOLATION

Data Element Name:	Area of Violation
Description:	Code to indicate the specific monitoring requirements area of a handler which is evaluated and found to be in violation with RCRA regulations/statutes. Areas generally correspond to subparts of CFR 40. Parts 262 for generators, 263 for transporters, and 264/265 for TSDs. Foreign key to Evaluation/Violation Area in LU_EVALUATION_VIOLATION_AREA.

Nationally Defined Values for Evaluation Type

Evaluation Types

Type	Name/Description
CAO	An on-site inspection of Corrective Action activities. When corrective action on-site inspection is conducted as part of another inspection type (CEI, CME, etc.), a separate Handler Evaluation form should be submitted reporting the CAO component.
CAV	Compliance Assistance Activity. The compliance assistance activities that a region or state conducts to assist handlers in achieving compliance as outlined in the OECA Operating Principles. CDI Case Development Inspection. A CDI may involve sampling to confirm the chemical composition/characteristics of wastes handled by generators and transporters, and their waste handling practices. In addition, facility operations and design information may be reviewed, and manifests from generators and transporters verified. A focused CDI may be conducted when a CEI reveals possible RCRA violations, and could serve to gather the additional data needed to support an enforcement case.
CEI	Compliance Evaluation Inspection. Is primarily an on-site evaluation of the compliance status of the handler with regard to all applicable RCRA Regulations and Permits. Although portions of a CEI evaluation may routinely be conducted in an agency office setting, such "office" evaluations are considered as integral parts of the CEI in terms of the evaluation completion date. The major function of the CEI is overall review of the Handler's performance. All treatment, storage, and disposal facilities receive this type of inspection either annually or biannually. The inspection includes an on-site examination of records and other documents maintained by the handler and an evaluation of the handler's compliance with all applicable requirements and adequate sampling (use CES for CEIs without adequate sampling). Where appropriate, it includes groundwater monitoring assessment outlines or plans, closure/post-closure plans, contingency plan reviews, waste analysis plan reviews, and preparedness and prevention plan reviews. Specifically excluded from the CEI type of evaluation are Financial Record Reviews. This review is most often conducted by "agency experts", and appropriately coded as Financial Record Review (FRR) type of evaluation.
CES	Compliance Evaluation Inspection Without Sampling. The CES type of evaluation indicates that the CEI was conducted without sampling. (Used by implementers who conduct CEIs through two separate site visits; one to do

	sampling and the other to complete the remainder of the CEI i.e., CEI = CES + SPL.)
CME	<p>Compliance (Groundwater) Monitoring Evaluation. A detailed evaluation of the adequacy of the design and operation of a facility's groundwater monitoring system as per EPA's Final RCRA Compliance Groundwater Monitoring Evaluation Guidance Document. Evaluation of the groundwater monitoring system design should be conducted by a hydro geologist and includes the review of the owner/operator's (o/o's) characterization of the hydro geology beneath hazardous waste management units, monitoring well placement and depth/spacing, and well design and construction. It is essential that the CME ensure that the o/o has designed an adequate groundwater monitoring system. In addition, an integral part of the CME is the review of the operation of the groundwater monitoring system through an evaluation of the o/o's sampling and analysis plan and its implementation. CMEs should be scheduled, to the maximum extent possible, to coincide with o/o sampling events to permit the field evaluation of sampling techniques. Inspectors should collect splits or conduct EPA/State sampling as a random check of groundwater quality data at any wells which may have indicated releases to support enforcement of corrective action.</p> <p>A comparison of EPA/State and o/o analytical results can be used to assess laboratory accuracy and establish the reliability of o/o submitted data. A CME should encompass everything covered in the CEI for groundwater monitoring facilities. In addition CMEs should include:</p> <ol style="list-style-type: none"> a detailed investigation of the engineering features and effectiveness of the groundwater monitoring system; a detailed review of the facility's groundwater sampling and analysis plan; re-calculation of statistics at detection monitoring facilities to ensure that the facility should not be in assessment; detailed examination of the facility's assessment monitoring plan and field implementation; re-evaluation of groundwater flow direction; and a substantial amount of sampling.
CMS	<p>Compliance (Groundwater) Monitoring Evaluation Without Sampling. The CMS type of evaluation indicates that the CME was conducted without a substantial amount of sampling. (Used by implementers who conduct CMEs through two separate site visits; one to do sampling and the other to complete the rest of the CME; i.e., CME = CMS + SPL.)</p>
CSE	<p>Compliance Schedule Evaluation. An on-site inspection or other re-evaluation conducted to verify compliance with enforcement actions resulting from a previous evaluation, or to review deficiencies noted in previous inspection. It may be a re-review of the adequacy of documents such as</p>

	closure plans or financial instruments previously found to be absent or deficient for which no enforcement action has been taken. A Compliance Schedule Evaluation should only be used if the effort involved, or the extent of areas inspected, are insufficient to qualify as one of the more comprehensive evaluation types listed above.
FRR	Financial Record Review. An extensive detailed review of a handler's compliance with financial responsibility requirements. Financial Record Reviews are conducted in the Agency office and not on-site.
FSD	Facility Self Disclosure. Indication that a handler has self-disclosed the existence of a violation and/or performed an audit and has submitted the information as appropriate to the State or EPA.
LBN	An inspection of land disposal restriction requirements. Where Land-Ban is inspected in conjunction with another inspection type (CEI, CME, etc.), a separate Handler Evaluation form should be submitted reporting the Land-Ban component.
NRR	Non-financial Record Review. An evaluation conducted in the Agency office involving a detailed review of non-financial records.
OAM	Operation and Maintenance Inspection. The Operation and Maintenance Inspection is a periodic inspection of how well a groundwater monitoring system continues to function once it is considered well designed. The inspection focuses on the condition of wells and sampling devices. Evaluation of well recovery notes, turbidity of water, total depth, depth to water, etc. should be made and compared to historic data. Sampling devices should be tested and if necessary pulled and visually inspected. The findings of an O&M inspection will indicate whether case development is warranted and/or will serve to focus future CMEs. The inspector should be experienced in evaluation of groundwater monitoring systems, e.g., hydrogeologist. This inspection can include sampling. However, if a great deal of sampling is conducted, a separate sampling inspection should be recorded.
OTH	Other Evaluation. Any type of evaluation other than those listed above.
SNN	Not a Significant Non-Complier (SNC). A determination has been made to remove the SNC designation for a facility. This can be as a result of the facility returning to full physical compliance with regulatory and/or statutory requirements or with a compliance schedule. Note: This is an orphan evaluation record that is not linked to any specific violation or enforcement action. An SNN record will automatically be created by RCRIS during the universe calculation if there is an SNY record not superseded by a more recent SNN and all outstanding violations have returned to full physical compliance (CEV_ACT_DTE not equal to blank). Alternately, the implementer can manually enter an SNN record to supersede an SNY record. In this case, the universe calculation program would not enter an SNN.

SNY	<p>A Significant Non-Complier (SNC). A determination has been made to classify a facility as a SNC using the following guidelines as set forth in the March 15, 1996 Hazardous Waste Civil Enforcement Response Policy (ERP). A SNC is a facility which has caused actual exposure or a substantial likelihood of exposure to hazardous waste or hazardous waste constituents; is a chronic or recalcitrant violator; or deviates substantially from the terms of a permit, order, agreement or from RCRA statutory or regulatory requirements. The actual or substantial likelihood of exposure should be evaluated using facility specific environmental and exposure information whenever possible. This may include evaluating potential exposure pathways and the mobility and toxicity of the hazardous waste being managed. However, it should be noted that environmental impact alone is sufficient to cause a facility to be a SNC, particularly when the environmental media affected require special protection (e.g., wetlands or sources of underground drinking water). Facilities should be evaluated on a multi-media basis; however, a facility may be found to be a chronic or recalcitrant violator based solely on prior RCRA violations and behavior. Note: This is an orphan evaluation record that is not linked to any specific violation or enforcement action. This determination should be entered into RCRIS within 90 days after the implementer (EPA/State) determination is made since the SNC designation will be made publicly available from the National Oversight Database (NOS).</p>
SPL	<p>Sampling Inspection. This is an evaluation type in which samples are collected for laboratory analysis. A sampling inspection will frequently be conducted in conjunction with the CES or CMS but occurs at a different time or by different personnel to stand on its own as a separate inspection. In those cases, a Handler Evaluation Form for each evaluation (Sampling and CES/CMS) should be completed to reflect that both were done.</p> <p>Sampling inspections may also be necessary for additional enforcement case development.</p>

Multimedia Evaluation Types

Type	Name/Description
MMB	RCRA CEI Performed with the Screening Checklist.
MMC	Comprehensive and Coordinated Inspection. This value includes the performance of a RCRA CEI in a coordinated effort with other programs at a handler's site.
MMD	Detailed Multimedia Inspection. This value includes the performance of a RCRA CEI by a specially trained inspector at a handler's site. MMS Multimedia Screening Checklist Only. A CEI was not performed; however, the screening checklist was performed alone or as part of another type of inspection.

Note: Multimedia evaluation data (MMB, MMC, MMD, MMS) began being inputted into RCRIS in FY95.

Nationally Defined Values for SEP/Enforcement Milestone Code

Code	Description
ECA	Environmental Compliance Audits. These audits are an independent evaluation of a defendant/respondent's compliance status with environmental requirements.
ECP	Environmental Compliance Promotion. A project that involves the dissemination of information, or the providing of training or technical support, to a regulated party or to some or all members of the defendant/respondent's economic sector to: 1) achieve and maintain compliance with regulatory requirements; 2) determine what are its regulatory requirements and thereby avoid committing a violation; or 3) go beyond compliance by reducing the generation, release, or disposal of pollutants beyond legal requirements.
EMA	Environmental Management Systems Audits. These audits are an independent evaluation of a party's environmental policies, practices, and controls.
<i>EPE</i>	Environmental Public Awareness. Projects that are publications, broadcasts, or seminars that underscore for the regulated community the importance of complying with environmental laws or disseminate technical information about the means of complying with environmental laws. <i>Note: EPE will remain in the table of valid codes for historical purposes, but is not valid for new data entry.</i>
EPP	Emergency Planning and Preparedness. An emergency planning and preparedness project is one where a defendant/respondent provides assistance, such as computers and software, telephone/radio communications systems, chemical emission detection and inactivation equipment, HAZMAT equipment, or training for first responders to chemical emergencies, to a responsible state or local planning entity.
ERE	Environmental Restoration. A project that goes beyond repairing the damage caused by the violations to enhance the condition of the environment adversely affected.
PHE	Public Health. A project that provides diagnostic, preventive, and/or remedial components of human health care that is related to the actual or potential damage to human health caused by the violation.
PPA	Pollution Prevention Assessments are systematic, internal reviews of

	specific processes and operations designed to identify and provide information about opportunities to reduce the use, production, and generation of toxic and hazardous materials and other wastes.
PPE	Pollution Prevention. A project that reduces the generation of pollution through 'source reduction', i.e., any practice that reduces the amount of any hazardous substance, pollutant, or contaminant entering any waste stream or otherwise being released into the environment prior to recycling, treatment, or disposal. If the pollutant or waste stream has been generated, pollution prevention is no longer possible and the waste must be handled by appropriate recycling, treatment, or disposal methods. Pollution prevention can be accomplished by: 1) Equipment/technology modifications; 2) Process or procedure modifications; 3) Product reformulation/redesign; 4) Raw materials substitution; 5) Improved housekeeping/O&M/training/inventory control; 6) In-process recycling; 7) Energy efficiency/conservation; 8) Other.
PRE	Pollution Reduction. A project that results in a decrease in the amount or toxicity of any hazardous substance, pollutant, or contaminant entering any waste stream or otherwise being released into the environment by a means that does not qualify as 'pollution prevention'.
SAA	Site Assessments. These assessments are investigations of the condition of the environment at a site, or of the environment impacted by a site, and/or investigations of threats to human health or the environment relating to a site.

Nationally Defined Values for Penalty Type

For 100 Series Enforcement Action Types:	
	No penalties should be associated with this type of enforcement action series.
For 200 Series Enforcement Action Types:	
PA	Proposed Monetary Penalty. The amount of the total penalty in dollars proposed in an initial enforcement action.
FA	Final Monetary Penalty. The amount of the total penalty in dollars a handler named in an enforcement action must pay directly to the responsible agency.
For 300 Series Action Types:	
FA	Final Monetary Penalty. The amount of the total penalty in dollars a handler named in an enforcement action must pay directly to the responsible agency (for consent agreements with SEP, this is exclusive of SEP credits).
FC	Final SEP Cost. The final amount cited in an enforcement action as the cost in dollars to the handler of a supplement environmental project.
CR	Final SEP Credit. The credit in dollars allowed by the agency for the completed SEP and applied towards the total final settlement amount.
For 400 Series Enforcement Action Types:	
PA	Proposed Monetary Penalty. The amount of the total penalty in dollars credits, proposed in an initial enforcement action.
For 500 and 700 Enforcement Action Types:	
FA	Final Monetary Penalty. The amount of the total penalty in dollars a handler named in an enforcement action must pay directly to the responsible agency.
For 600 Enforcement Action Types:	
FA	Final Monetary Penalty. The amount of the total penalty in dollars a handler named in an enforcement action must pay directly to the responsible agency.
FC	Final SEP Cost. The final amount cited in an enforcement action as the cost in dollars to the handler of a supplement environmental project.
CR	Final SEP Credit. The credit in dollars allowed by the agency for the completed SEP and applied towards the total final settlement amount.
For 800 Enforcement Action Types:	
	No penalties should be associated with this type of enforcement action series.

Flat File Specification Glossary

Actual Date	The completion date of an event.
Allowed Values	Lists valid data values and their descriptions. "N/A" (not applicable) will be indicated for data elements that do not have a list of values.
Comments	Provides additional information on the data element.
Data Element Name	A short English description of the data element.
Data Elements	Column names and descriptions of data elements which are not part of the primary key.
Default Value	Indicates the value given to a data element if the user does not supply a value.
Description	An English description providing the general definition of the element.
Event Code Name	A name which corresponds to a specific event or event type.
Foreign Key	A key field that identifies records in a different table.
Format	Specifies the Oracle format of the data element including field type and length.
Implementer Defined Codes	Indicates implementer defined values for this element are allowed.
Initiating Source	Indicates the source of information for the data element (i.e., Notification Form, Part A Permit Application).
Nationally Required	Indicates whether the data element is necessary for the oversight of the RCRA program. Some computer-generated data elements are also considered nationally required because they are key fields to the RCRAInfo database.

Oracle Column Name	Oracle name which identifies the data element.
Primary Key	Data elements that are used to uniquely identify a row in an Oracle table.
Released	Indicates data that Headquarters may release to the public via Envirofacts, NTIS, RTKNet, FOIAs, Web Report postings, etc...
Responsible Agency	Code indicating the agency responsible for the event.
Schedule Date	The date for which an event is targeted to occur.
Source	Indicates the BRS form/location which was the source of the information.
Sources of Update	Indicates the source of information to update the data element (i.e., EPA/State Inspection, Permit Modification)
System Required	Indicates whether the element is necessary for data integrity and for proper functioning of RCRAInfo. Some system-required data elements are computer generated, but many must be provided by the user. The user cannot continue until all system required elements are complete.
